FABRIC WASHING

Washing fabrics is a delicate and complex operation that requires perfect knowledge of the features of the materials and the most appropriate ways to treat them.

We are always engaged in R&D to study the various types of materials and washing procedures.

The identification of the most suitable raw materials for a proper washing is a key process in our work, combined with our attention for the environmental impact.

The detergents and additives of our line allow to obtain high performance even at low temperatures.

ENZILAVA

Super concentrated **enzymatic** liquid professional detergent for washing white and coloured clothing with relevant dirt in the washing machine. Particularly suitable for washing at low (30°) and medium (60°) temperatures of fabrics, in natural or synthetic fibres.

5 kg
20 kg

LAVABEN

Super concentrated professional liquid detergent for washing machines formulated to **remove all types of dirt** in the laundry. Also used at low temperatures, this detergent has been designed to protect the fibers and facilitate ironing.

5 kg

LAVATRIX - N

It is a powder detergent designed for use in a mechanical washing machine. It is particularly rich of **active substances**, very suitable for the elimination of greasy dirt even in very hard water. It is usable both in washing and pre-washing cycles.

10 kg

LANABEL

Creamy liquid and pleasantly scented detergent, formulated with **special surfactants** specific for wool and the most delicate fibers. Softeners and other components allow even to remove heavy dirt without felting the fabric.

5 kg
20 kg

ACIDO ACETICO 80%

Neutralizing acid additive for washing machines. It **reduces PH** during rinsing cycle after using a highly alkaline detergent.

10 kg
25 kg

ACQUA OSSIGENATA 35%

Used in the washing cycle of professional washing machines in the whitening phase. Thanks to its **"oxidizing" power**, that is to form oxygen, it is used to pre-treat stains and eliminate bad odors from fabrics.
