**COFFEE  
MACHINES  
MAINTENANCE**

## Coffee is not enough for a good Espresso!

I often hear that to get a **good espresso** is enough to start from a highly selected and expertly toasted raw material. I say that is not really the case! In fact, the **bartender** also plays a primary role not only for the care and awareness that he must have during the transformation of the product from solid to liquid, but also in the cleaning of his equipment. Taking care of the equipment on a daily basis, cleaning it correctly with **specific products** contributes to greatly improve the quality of the espresso we serve in our bar. This is because the oils contained in the coffee settle on all parts of the equipment with which they come into contact. Obviously water is not enough to remove them, that is why I rely every day to **"TIEFFE CHEMICAL SOLVING"**, the professional product line for the maintenance of steam lances, shower groups, valves and all the water passages that, if perfectly cleaned, will get free your cups from black bottoms in the cup. Thus avoiding ingesting carcinogenic substances that contaminate the purity of an espresso taste, by bringing hints of burned, bitter and rancid.

### CATERING MACHINES AND CAPPUCCINATORI

#### LATTE OK

Ecological citric based detergent for cleaning steam lances of coffee machines and cappuccino machines, automatic milk mouter. Specially designed to remove the residuals and fouling of milk stone without damaging the components in contact in the long term.

### COFFEE MACHINES FOR BARS

#### CAFFÈ OK

Powder detergent with descaler action designed for the removal by circulation of organic residuals and limestone from the filters of the shower groups of coffee machines.

#### CAFFÈ DOC

Degreasing gel used with blind filters, aimed to the removal of organic residuals from the coffee machine groups.

### DOMESTIC AND OFFICE MACHINES

#### CAFFÈ CALC

Organic powder descaler aimed to the maintenance of domestic and office coffee machines equipped with water tank. It eliminates limestone residues maintaining the efficiency of mechanical parts. It does not damage rubber seals.

#### LATTE OK

Ecological citric based detergent for cleaning steam lances of coffee machines and cappuccino machines, automatic milk mouter. Specially designed to remove the residuals and fouling of milk stone without damaging the components in contact in the long term.

### CLEANING OF DISASSEMBLED PIECES

#### REMO KAL ECOL

Organic liquid descaler aimed to the maintenance of disassembled pieces of coffee machines.

#### REMO KAL CAFFÈ CLEANER

Suitable for the maintenance of automatic coffee machines, steam coils, cooling systems, for the removal of oxidation from metal surfaces. It can be used by circulation or immersion and through ultrasonic systems.

#### CAFFÈ CALC

Organic powder descaler with active ingredients aimed to the maintenance of disassembled pieces of coffee machines, boilers, heat exchangers and encrusted pieces. It eliminates limestone residues maintaining the efficiency of mechanical parts. It does not damage rubber seals.

#### REMO KAL HW

Suitable product for removing limestone fouling, used as a deoxidant of metal surfaces by immersion or circulation even with hard waters. It contains inhibitors preventing its solutions to attack the treated surfaces.
